

## CASE STUDY

# 1180 Winnersh

### Brief

Our works at Winnersh include the internal refurbishment of Building 1180, including the formation of a new ground floor café area and reception.

### Project info

Attractive, functional and liveable spaces featuring bespoke joinery.

To create these attractive, functional and liveable spaces, we undertook refurbishment of the lift lobbies and common parts, and the installation of new shower facilities. Our works included the installation of a bespoke soffit mesh raft, both internally and externally to the entrance canopy.

Bespoke joinery finishes to the reception were installed, along with a living green wall and feature planting to several areas. The new mechanical and electrical installations included lighting, ventilation, heating and cooling, and small power.
