

CASE STUDY

210 Wharfedale Road, Winnersh

Brief

Our works on Wharfedale Road included an extensive strip out of the building to take it back to shell and core including demolition of the existing main entrance and corners of the building.

Project info

A double-height reception area, a new canopy and bespoke joinery.

To create a spacious double-height reception area we erected a new steel framed extension. Externally, a new canopy, glazed curtain walling and cladding were installed, along with feature cruciform LED columns. A high standard of finish was achieved within the reception area featuring bespoke joinery, a new atrium roof-light, concrete effect Armourcoat surfaces and tiled flooring.

A new passenger lift and main entrance staircase were also installed and encased with bespoke joinery providing access to the common part areas, which included new WCs and shower accommodation.
