

CASE STUDY

Royal College of Surgeons

Brief

This unique project involved the formation of new surgical teaching facilities at the Royal College of Surgeons.

Project info

Teaching and surgery areas featuring specialised equipment for this historic college.

Works at the Royal College of Surgeons comprised of the strip out of the existing surgical workshop on the fourth floor of the building, inclusive of all redundant MEPH services. New teaching areas were formed, including the installation of new surgery areas containing specialist lighting and surgical equipment. A local reception area was formed on the fourth floor, and at roof level we installed a new chiller plant and associated enclosure.
